

Goal: identical points and PCA coordinates, different scoring dimensions
58 unseen B trajectories, 344 sampled queries; PCA retains 87.5% variance

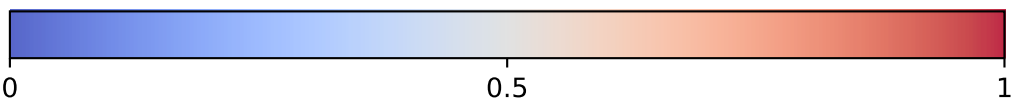

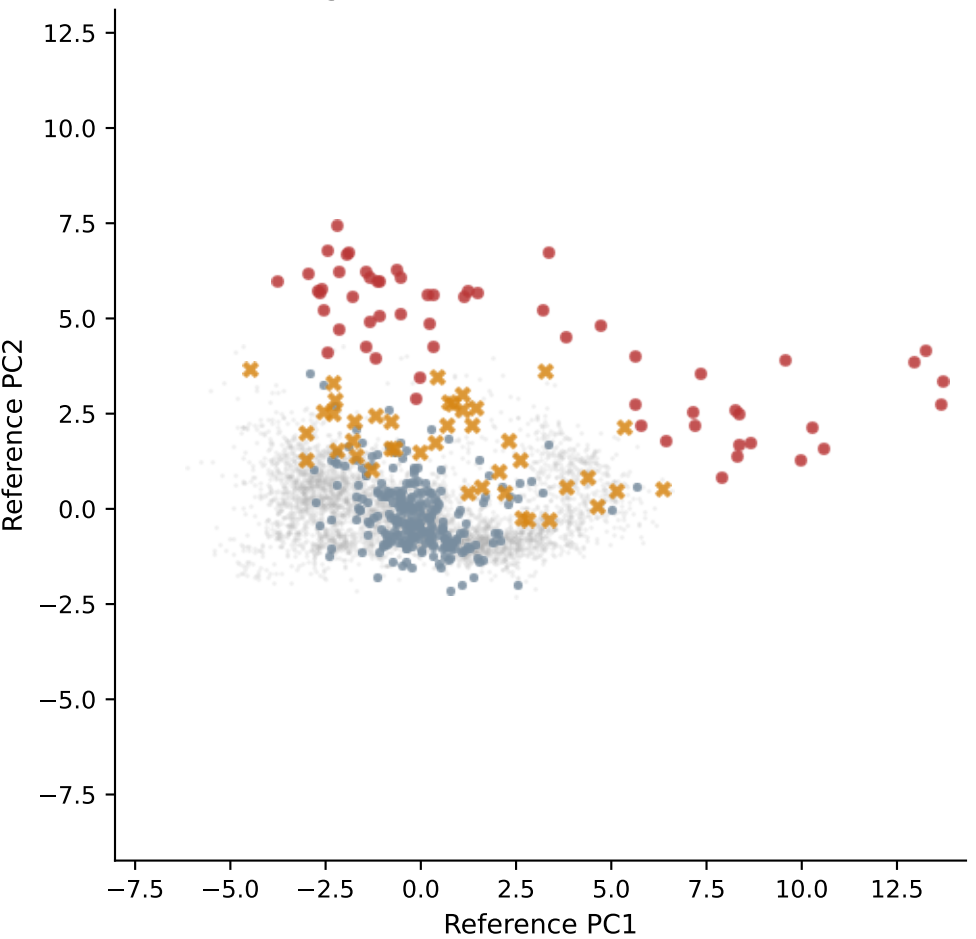

Original 2D kNN boundary
2D threshold = 1.186

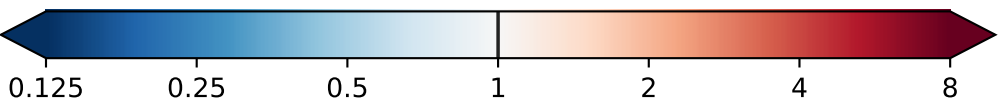

Actual 10D kNN score
10D threshold = 1.880

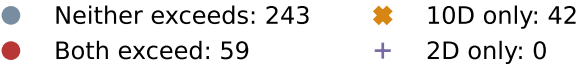

Current threshold decisions
Orange X: 10D exceeds, 2D does not

Failed-rollout progress; success stays blue (0)

10D distance / threshold (1 = threshold; log scale)

Green line belongs only to the 2D method. Decisions use current scores, not latched alarms. Labels only affect illustration sampling and progress color.
