

Long: identical points and PCA coordinates, different scoring dimensions
42 unseen B trajectories, 336 sampled queries; PCA retains 87.1% variance

Original 2D kNN boundary
2D threshold = 3.549

Actual 10D kNN score
10D threshold = 4.068

Current threshold decisions
Orange X: 10D exceeds, 2D does not

Neither exceeds: 325
Both exceed: 11
10D only: 0
2D only: 0

Green line belongs only to the 2D method. Decisions use current scores, not latched alarms. Labels only affect illustration sampling and progress color.
