

Object: identical points and PCA coordinates, different scoring dimensions
34 unseen B trajectories, 259 sampled queries; PCA retains 86.1% variance

Original 2D kNN boundary
2D threshold = 0.877

Actual 10D kNN score
10D threshold = 2.348

Current threshold decisions
Orange X: 10D exceeds, 2D does not

● Neither exceeds: 242 ✖ 10D only: 3
● Both exceed: 14 + 2D only: 0

Green line belongs only to the 2D method. Decisions use current scores, not latched alarms. Labels only affect illustration sampling and progress color.
